Quantum Entanglement

EM Electricity
 Neutrino in a loop without polarity
 DNA

M theory is quantum navigation
 It's not what you can add, it's what you can overlap and take away. The rest you adjust with entanglement. The soul is 21 grams, neutrino looping of the 21 grams. 1836 electrons compressed into an energy globe produces a proton, how many electrons does a DNA strand have?

Reincarnation might also work this way
 Combine your dna with many

Add in D-Wave Leap and MIT, Stanford

You do not need rare earth if you can synthesize something much greater

You do not need to drill on the moon if you can mass produce at home

You can recreate the Arctic with man made Ice Stupas

Can also be used in deserts to initiate new growth and waterways

People dont need to work or be a debt if everything is mass produced and synthetic anyway
